

**Draft for supplementing the Methodology for setting the regulated tariffs practiced by the gas balancing market operator, endorsed by ANRE through the opinion no. 24/2019.**

Art. 11 - (1) The partial recovery or excess recovery by the gas balancing market administrator of the income related to the activities performed, registered within a tariff period, is regularized by adjusting the income to be recovered from the activities provided by the gas balancing market administrator in the following tariff period.

**Wording proposed for para (2):**

(2) – If the correction component  $DV_{(t)}$  induces a significant change in the level of the substantiated income for the tariff period  $t$ , it may be decided to stagger the recovery /disposal of the difference over the next two tariff periods or over several tariff periods, if the value resulting from the staggering in two tariff periods exceeds the substantiated level of the costs for the tariff period  $t$ .

**Wording proposed for para (3):**

(3) – The operator may change the tariff within the tariff period if the income achieved/estimated by the operator for the first 6 months of the tariff period differs by at least 5% compared to half of the substantiated income related to the tariff period.
