## RELEASE

Today, June 27<sup>th</sup> 2025, at Transgaz' Headquarters in Bucharest, the Memorandum of Understanding between JP Srbijagas from the Republic of Serbia and SNTGN Transgaz SA from Romania was signed.

On behalf of Transgaz, the Memorandum was signed by Director General Ion Sterian, and on behalf of JP Srbijagas by the company's CEO, Dušan Bajatović.

During the meeting, the CEOs of the two companies agreed that they will jointly prepare and in September of this year they will present a joint plan for:

- *The realization of the "Interconnection of the National Natural Gas Transmission System of Romania with the National Natural Gas Transmission System of the Republic of Serbia", which involves the construction of a new natural gas transmission pipeline that will ensure the connection between the BRUA gas transmission pipeline and the Mokrin Technological Node in Serbia;*
- *The realization of the Mokrin-PCG Banatski Dvor-Pančevo-Belgrade Southern gas pipeline.*

The construction of the Romania-Serbia interconnection is of major strategic importance for both countries, especially in the current energy context, in terms of the necessity to diversify supply sources, increase security of gas supply, balance supply and demand and facilitate cross-border gas transportation operations between relevant EU and non-EU Member States and third countries.

The Memorandum of Understanding signed between SNTGN Transgaz SA and JP Srbijagas outlines the framework and basic principles for the coordination of activities to be carried out between the two companies.
